# The RockIT Algo – 2 Steps Trading Plan

Profitable P&L

Step : 1

Follow the Signals

SELL (SHORT)

Step : 2

If stop loss amount hit, get out of the trade.

(Increases your Profit – Less Loss[Expenses])

Wait for next signal.

RockIT Algo Profitable Trading Plan  
SPX (S&P 500 Index)  
High Profit Factors  
*Top Trading Plans by Profit & Profit Factor*

*Note – Past performance does not guarantee future performance. These are findings being shared by back testing RockIT algorithm.*

# What is Profit Factor? Why Care?

## What is Profit Factor?

The profit factor is a mathematical metric that divides the gross profits by the gross losses. The profit factor is basically a ratio of risk reward. Example : If you have a strategy that has accumulated \$500 in profits and \$250 in losses, the profit factor is two.

Basically, Profit Factor 2 means that if I invest \$1, I can expect to get \$2 back from trading the algorithm.

A profit factor higher than 1.5 means that you get half the investment corresponding value in profit, so for each dollar invested you earn 50+ cents.

*What is an effective profit factor value? (Our Opinion)*

A good profit factor in trading is above 1.7. We would be skeptical if the value is lower than 1.7, but at the same time, we are also skeptical if above 3.5. A realistic profit factor is around 1.75.

**Important – You can increase your Profit Factor by implementing stop losses after you place the trade. The effective way to increase profits.**

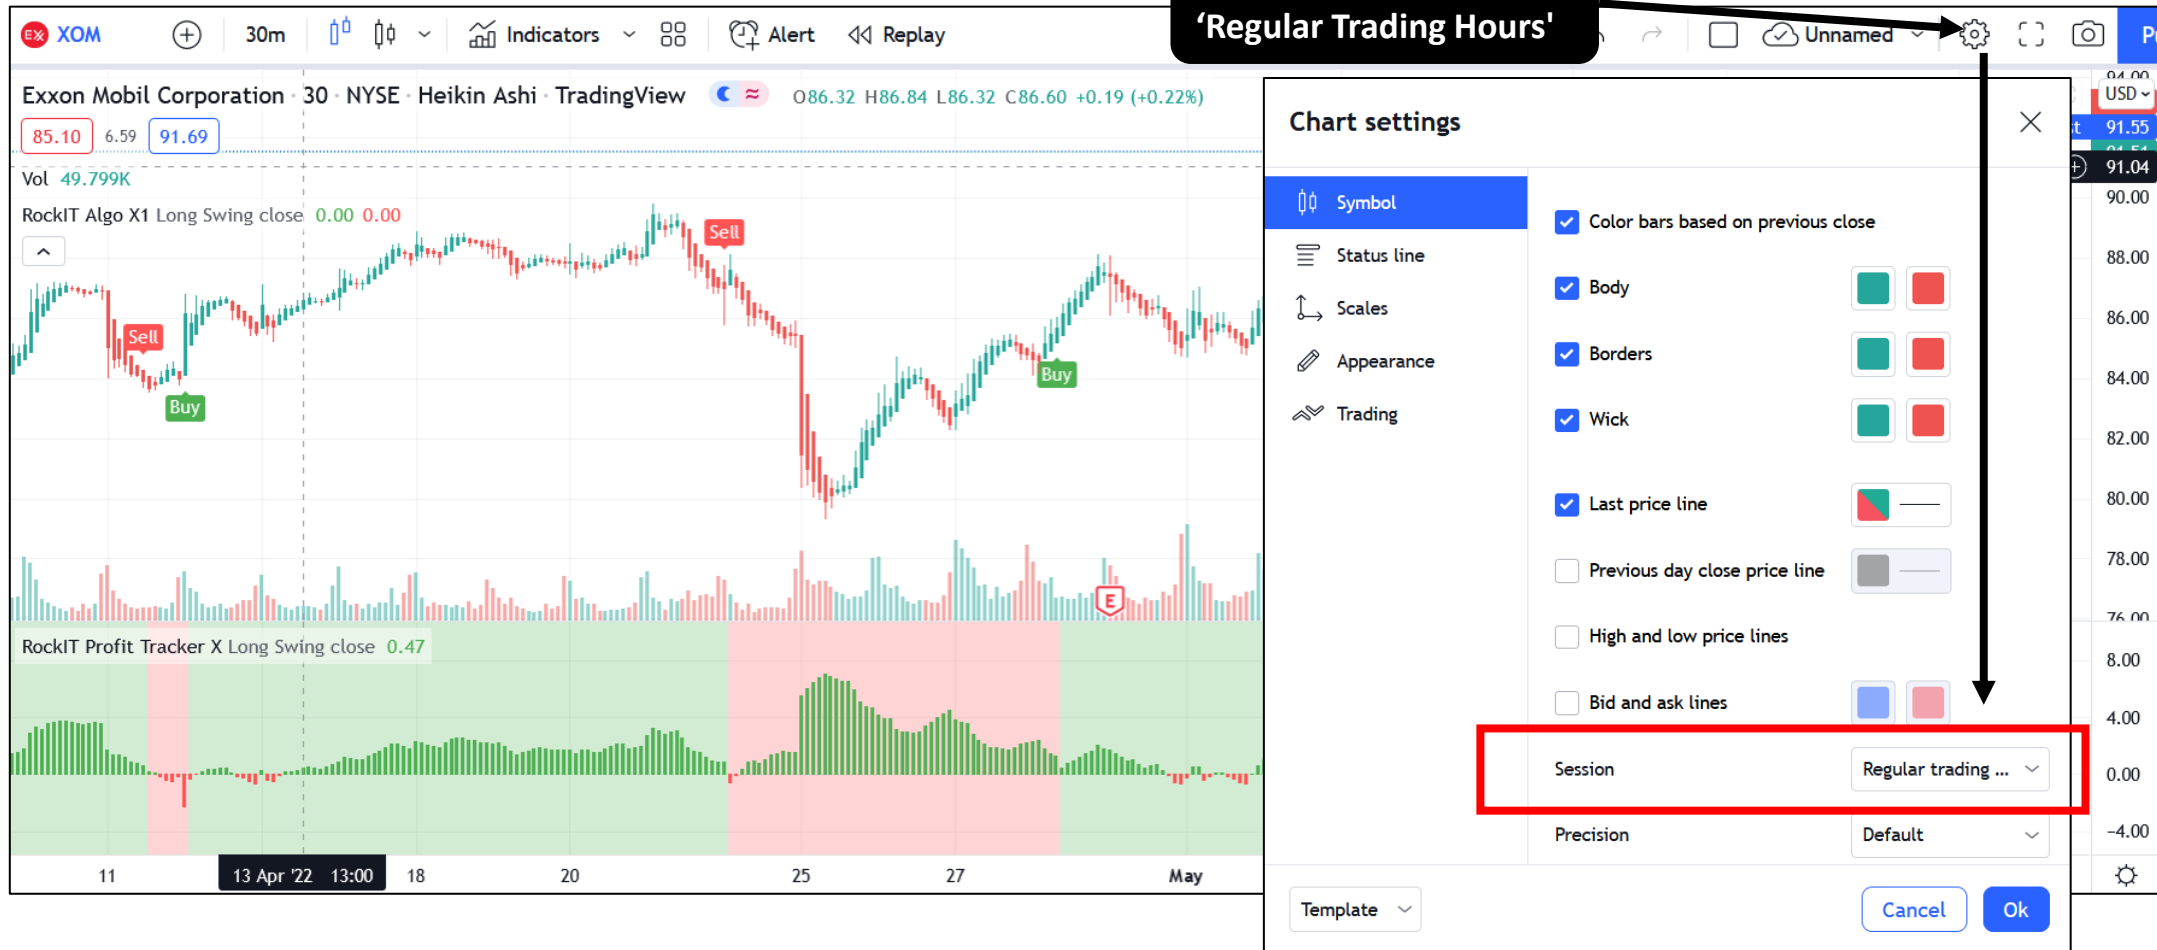

# Chart Type – Regular Trading Hours / Candle Stick.

**RockIT Algo strategy (profit realized and profit factor) has been tested for REGULAR TRADING hours.**

**Make sure you set your chart to Regular Trading hours**

Set your chart to  
'Regular Trading Hours'

# RockIT Algo Trading Plan : SPX (S&P 500 Index)

*The top profitable RockIT Algo trading styles by timeframe.*

**Jan 1, 2022, to Oct 31, 2022.**

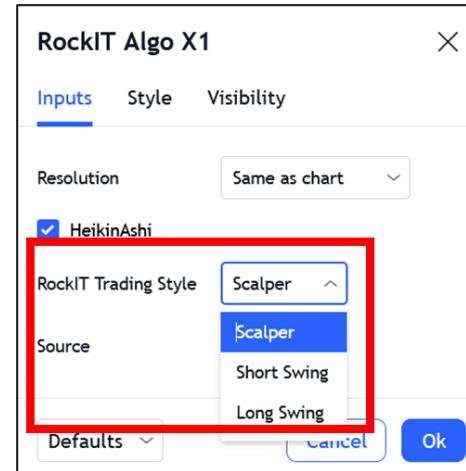

Based on Buying (Long) & Selling (Short) 1 unit.

Gross Profits / Gross Loss.

Average duration of the trade.

Profit Factor Rank	RockIT Algo Trading Style	Timeframe	Profit Realized Jan to Sept 22	Profit Factor	Average Bars In Trade
1	Scalp	1 Minute	\$3999	1.2	8
2	Short Swing	1 Minute	\$2377	1.1	18
3	Long Swing	15 Minutes	\$1485	2.1	72
4	Short swing	2 Minutes	\$1365	1.1	18
5	Scalp	5 Minutes	\$1244	1.1	8
6	Long Swing	1 Minute	\$950	1.1	23

**For timeframes 15 minutes and below.**

## STOP LOSS

Always, and we mean always place your stop loss order after you your trade in open.

View slide 17 for ideas.

Note – RockIT Algo is designed to reduce losses. This means you can trade signal to signal. Sometimes during high volatility, stop losses will be high. Don't worry, RockIT Algo will erase those losses moving forward.

However, we reconned to add stop loss.

**Strategy Recommendation : Focus on these RockIT Algo trading styles / time frames to realize best performance gains.**

*Note – Past performance does not guarantee future performance. These are findings being shared by back testing RockIT algorithm.*

## STOP LOSS

Always, and we mean always place your stop loss order after you your trade in open.

View slide 17 for ideas.

Note – RockIT Algo is designed to reduce losses. This means you can trade signal to signal. Sometimes during high volatility, stop losses will be high. Don't worry, RockIT Algo will erase those losses moving forward.

However, we reconned to add stop loss.

For timeframes 30 minutes and above.

**Strategy Recommendation : Focus on these RockIT Algo trading styles / time frames to realize best performance gains.**

*Note – Past performance does not guarantee future performance. These are findings being shared by back testing RockIT algorithm.*

1

## Profit Factor

You can trade taking into consideration profit tracker or profit generated. It is an individual preference based on trading personality.

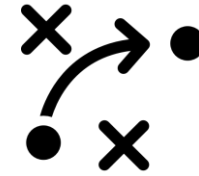

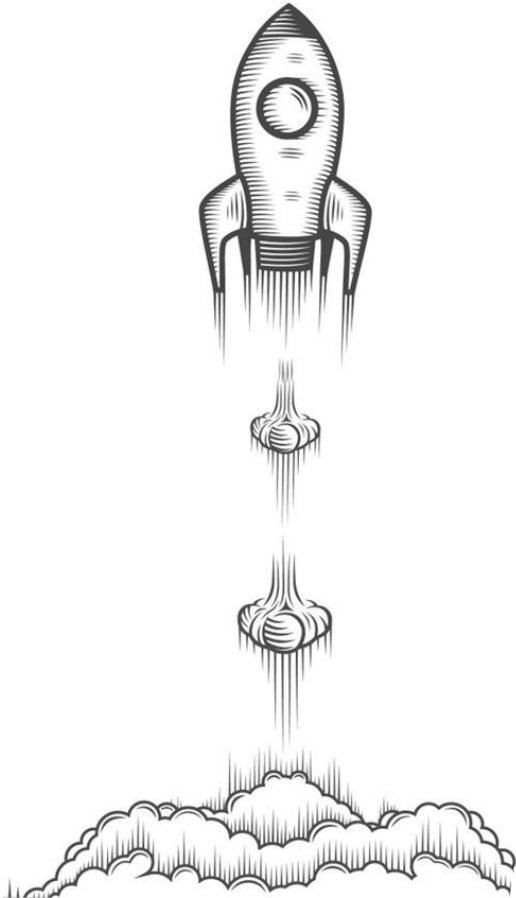

2

## Stop Loss

After entering a long or short trade we always put our stop loss orders to minimize losses. The truth and fact is that losses will be there. You control them and you will profit. Treat it as a business – Keep expenses (losses) low and revenue (profit) high.

Cautious

Stock – Buy stock and close stock short position.

## SELL SIGNAL

When You Get SELL Alert...

OPTIONS - Buy PUT Option & Close Bought CALL Option  
Stock – Sell stock short and Close bought stock position.

***Repeat from signal to signal.***

# Setting up RockIT Algo – The Stop Loss

*The stop loss amount is subjective in nature and depends on your trading style, volatility and forex price.*

*Usually, we follow price action to define our stop loss amount. Strategy illustrated below.*

*Note – Develop your own strategy based on what has worked for you in the past.*

## FOR BUY (Long Position) - Stop Loss Level

- We usually use the LOWEST value of past 3-4 candles.

## FOR SELL (Short Position)- Stop Loss Level

- We usually use the HIGHEST value of past 3-4 candles.

# Important points you have to execute for the strategy to be successful.

## Stop Loss

It is not necessary to have a stop loss as RockIT Algo takes care of it. However, we trade with a stop loss as this decreases our losses and increases our profits (returns).

We do recommend you put a stop loss in place based on your strategy.

## Trade Small

Begin by trading small. Increase size as you collect profits.

## Consistent Trading (Options)

1. Trade the same delta for both Call and Put options.
2. Trade the same number of contracts for both Call and Put options. Do not trade unevenly.
3. If you want to increase or decrease, then trade the same number of contracts for both calls & puts.

### *Why consistent trading?*

You want both profit and loss to be on equal footing. Sometimes if you trade bigger and incur a loss then your loss will outweigh your profit because you traded smaller when there was a profit.

**Thank You!!**

Our customer success team at RockIT Algo is dedicated to your success. Connect with us anytime you need guidance & we will arrange a 1 on 1 to provide guidance & training to win.

Drop us an email & we will connect to train you 1 on 1. We see no reason to fail.
